

The Project Sheet

One document. Eight blocks. Filled top-down before you generate a single image. By the time the last QC box is green, the project is shippable — generation is just paste-and-fire.

The rule. If any block is empty or vague, don't open the generator yet. Go back. This sheet is what separates a tinkerer from a working AI creator.

PROJECT _____	BRAND / CLIENT _____
LEAD ARTIST _____	DATE FILLED _____
FORMAT ☐ IG carousel ☐ Reel / TikTok / Short ☐ 16:9 video ☐ Static post ☐ Story sequence ☐ Length / card count: _____	

How the 8 blocks fit together

#	BLOCK	CAPTURES	TIME	DEPENDS ON
1	Concept + brief	One paragraph — what, why, who, format, length	5 min	—
2	Distribution plan	Hook line + caption + hashtags + CTA + posting plan	15 min	—
3	Locked assets	Character sheets + product sheets + brand kit references	10 min	(sheets exist)

#	BLOCK	CAPTURES	TIME	DEPENDS ON
4	Storyboard	Frame-by-frame description grid	20 min	3
5	Shotlist	Numbered table — prompt JSON + refs + status	30 min	3 + 4
6	Motion brief <i>(video only)</i>	Camera move + subject action + duration + transition	15 min	5
7	Audio brief	VO script + music register + SFX, OR "(silent post)"	15 min	—
8	QC checklist	Pre-publish gate	5 min	all blocks

Why distribution (2) comes before storyboard (4): *the hook line dictates shot 1. If you don't know the caption, you can't compose the opening frame.*

BLOCK 1

Concept + brief

5 MIN · NO DEPS

Every project starts as a sentence. If you can't write it in one paragraph, you don't know what you're making yet.

ONE-PARAGRAPH CONCEPT — WHAT, WHY, WHO, FORMAT, LENGTH

Common skip — starting to generate before you can name the concept in one paragraph. The shoot becomes whatever the first prompt produces, and the project never recovers a coherent shape.

The hook line dictates shot 1. The caption shapes what the carousel needs to pay off. Distribution before storyboard, every time.

Hook line first 2 sec / card 1 overlay	
Full caption earn the hook · land on the CTA	
Hashtags 3 niche · 3 broad · 2 brand	
CTA comment / DM / link in bio / save / share	
DM funnel keyword if comment-bait	
Posting time + platform day + time + IG / TikTok / X / LI	

Common skip — writing the caption AFTER the shoot. Result: a hashtag dump that doesn't match the frames, and the post never lands.

Identity is decided HERE, not in shot prompts. Every shot below references these by name.

Character sheets (F-Sheet)

Sheet 1 — name	
Reference URL	
Used in shots	
Sheet 2 — name	
Reference URL	
Used in shots	

Product sheets (F-PSheet)

Sheet 1 — name	
Reference URL	
Used in shots	
Sheet 2 — name	
Reference URL	
Used in shots	

Brand kit

Palette hex codes	
Typography caption overlay font + weight	
Voice tonality	

one line

Common skip — re-describing identity in every prompt ("a fluffy white cat with green eyes..."). Across 5 shots, the subject drifts into 5 different subjects. Locked assets forces ONE reference to be the source of truth.

The spine of the deliverable. Before generation, it's text descriptions. After generation, real stills replace the placeholders.

Duplicate the shot block for as many frames as the project needs. Post-generation, paste the real stills below to replace the text descriptions.

Common skip — going straight to prompts and skipping what each frame DOES in the narrative. Result: 5 pretty images that don't tell one story.

The paste-and-generate working table. Each shot row = one prompt to fire. Status column = your kanban.

IMAGE PROMPT

Add a shot block for every additional shot. Each row points at a JSON file in the project folder — full prompt JSON lives there, not duplicated here. Update status as each shot moves  →  → .

Common skip — keeping prompts in a Notes app and losing track of which version is the latest. The shotlist as a table IS the version-control system.

If carousel: skip — no motion. If video: every clip needs a deliberate move, or every shot drifts into "subject just stands there."

☐

Skip — this is a carousel

☐

Fill — this is a video

TRANSITION OUT

S3

CAMERA MOVE

SUBJECT ACTION

DURATION (SEC)

TRANSITION OUT

Common skip — treating AI video as "image + generic motion." Result: every clip feels the same.

If the post has sound, audio is half the deliverable. If it's silent, write "(silent)" — explicit, not assumed.

☐

Silent post (no audio)

☐

Audio post (fill below)

VO SCRIPT — CLEAN PASTE BLOCK (SPOKEN WORDS ONLY)

VO SCRIPT — ELEVEN V3 TAGGED BLOCK (INLINE [WARM] [EXCITED] PER BEAT)

Music registergenre + energy + reference
track**SFX**

keyed to shot numbers

Common skip — "I'll figure out audio later." Later never comes; the post ships with random royalty-free music that fights the visuals.

QC checklist — pre-publish gate

5 MIN · DEPENDS ON ALL

Any unchecked box = do not post. This is the discipline gate.

☐	Identity locked across every shot (same subject, no drift)
☐	Brand colors consistent across the set
☐	Caption + hashtags ready (Block 2 filled and frozen)
☐	CTA + DM funnel keyword in place
☐	Posting time + platform set
☐	If video — audio mixed + captions burned in
☐	If carousel — card order finalized + card 1 is the hook
☐	Final shot includes save-or-share moment

All boxes ✓ = ship. Any box ● = do not post yet.

Common skip — posting when it "looks done." 24 hours later you notice the subject in shot 3 doesn't match shot 1. QC catches this before it ships.

Where this fits

Three scopes. Project Sheet is the outer wrapper. Shoot Template is the middle. F-Sheet / F-PSheet are the reusable atoms.

DOC	SCOPE	WHEN YOU USE IT
Project Sheet (this file)	One posted deliverable	Once per project
Shoot Template	One shoot inside a project	Once per shoot block (a project can contain multiple shoots)
F-Sheet	One character identity	Once per character; reused across many projects
F-PSheet	One product identity	Once per product; reused across many projects
